2018 KİTABIN İÇERİĞİ, AÇIKLANMASI VE DÜZENLENİŞ YÖNTEMLERİ

DSİ Genel Müdürlüğü'nce işletilmekte olan 1320 adet Akım Gözlem istasyonuna ilişkin veriler, DSİ Bölge Etüt, Planlama ve Tahsisler Şube Müdürlükleri Rasatlar Baş Mühendisliklerince ve Rasatlar Şube Müdürlüğü'nce 'Su Veri Tabanı Rasatlar Modülü' yazılımı kullanılarak değerlendirilmiştir; '2018 AKIM GÖZLEM YILLIĞI' adıyla iki (2) cilt olarak yayınlanmıştır. Her cilt ise iki bölüm olarak düzenlenmiştir.

Birinci ciltte toplam 655 istasyonun 2018 su yılı değerlendirilmesi incelenmiştir.

Bu cilttin;

1.Bölümde; 01.10.2017 - 30.09.2018 tarihleri arasında açık durumda bulunan ve değerlendirilen **530** adet AGİ ile çeşitli sorunlar nedeniyle sonradan yeniden değerlendirilen ve bu su yılı kitabında yayınlanan 2 adet AGİ verisi yer almaktadır.

2.Bölümde; 01.10.2017 - 30.09.2018 tarihleri arasında açık durumda bulunan, ancak hidrometrik değerlendirme standartlarını karşılayamadığı için değerlendirilemeyen **125** adet akım gözlem istasyonuna ait bilgiler yer almaktadır.

Bu yılda GGİ verisi yer almamış olup, ayrıca çıkarılacak bir kitapta göl seviye verisi yayınlanacaktır.

1.BÖLÜMLE İLGİLİ AÇIKLAMALAR

1.1 ORTALAMA AKIMLAR (m³/s) :

Gözlem süresinde ortalama akım: İstasyonun açıldığı tarihten başlayarak 30.09.2018 gününe kadar değerlendirildiği süre içinde, günlük ortalama akımların ortalamasıdır.

2018 su yılında ortalama akım: 01.10.2017 – 30.09.2018 tarihleri arasında hesaplanan günlük ortalama akımların ortalamasıdır.

1.2 EN ÇOK VE EN AZ AKIMLAR (m³/s) :

Gözlem süresinde anlık en çok ve en az akım: İstasyonun açıldığı tarihten başlayarak 30.09.2018 gününe kadar değerlendirildiği süre içinde seviye ölçerlerce saptanan seviyelerin en büyüğünün ve en küçüğünün karşılığı bulunan anlık akımlardır.

2018 su yılında anlık en çok ve en az akım: 01.10.2017 – 30.09.2018 tarihleri arasında seviye ölçerlerince saptanan seviyelerin en büyüğünün ve en küçüğünün karşılığı bulunan anlık akımlardır.

1.3 SU YILINDA GÜNLÜK AKIMLAR (m³/s) :

01.10.2017 –30.09.2018 tarihleri arasında AGİ'lerin günlük orta seviyelerinin karşılığı olan akımlardır.

1.4 AYLIK TOPLAM AKIM (Milyon m³) :

Kapsadığı ay içinde ait olduğu istasyon kesitinden geçen toplam suyun milyon metreküp veya hektometreküp cinsinden hacmidir.

1.5 AYLIK EN ÇOK VE EN AZ AKIMLAR (m³/s) :

Kapsadığı ay içindeki günlük seviyelerin en büyüğü ve en küçüğüne karşıtı olan anlık akımlardır.

1.6 AYLIK ORTALAMA AKIM (m³/s) :

Kapsadığı ay içinde günlük orta seviyelerinin karşıtı olan akımların ortalamasıdır.

1.7 HAVZA VERİMİ (lt/ sn/km²) :

Aylık ortalama akımın bin ile çarpılıp yağış alanına bölünmesinden elde edilen değerdir. Regülatörlerde, kanallarda, baraj çıkışlarında ve göl ayaklarında mevcut istasyonların yağış alanı olmadığı için havza verimleri hesaplanmaz.

1.8 AKIŞ YÜKSEKLİĞİ (mm) :

Aylık toplam akımın bin ile çarpılıp yağış alanına bölünmesinden elde edilen mm cinsinden akış yüksekliğidir. Yağış alanı olmayan istasyonlarda akış yüksekliği hesaplanmaz.

1.9 AKIM ANAHTARLARININ BELİRLİ SEVİYELERİNİ KAPSAYAN AKIMLAR:

Su yılı içinde en uzun süre kullanılan akım anahtarının belli sayıdaki karakteristik değerleridir. AGİ'deki belirli seviyelerin karşılığı debiler veya belirli debilerin karşılığı eşel seviyeleri yaklaşık olarak bu küçük tablo yardımı ile bulunabilir.

2. BÖLÜM

2.1 AKIM ÖLÇÜMLERİ :

01.10.2017 - 30.09.2018 tarihleri arasında değerlendirilemeyen AGİ'lerde yapılan akım ölçüleri: Ölçünün yapıldığı tarihler, seviyeler (cm) ve debiler (m³/s) olarak verilmiştir. Bu akım ölçüleri akım anahtarı çizilmesi ve hidrometrik değerlendirme yapılması için yeterli görülmemiştir.

Bu gözlem yıllığında yer alan gözlem istasyonlarının koordinatları, yağış alanları ve kot (rakım) bilgileri, 1/100000 ve 1/250000 ölçekli haritalardan çıkarılmıştır.

Baraj çıkışında, göl ayağında bulunan regülatörlerde, sulama kanallarında bulunan gözlem istasyonlarında, yağış alanı ve kot bilgisi verilmemiştir.

VERİLERİN GÜVENİRLİĞİ :

Akarsu akım değerlerinin belirlenmesinde; gerek akım ölçüsünün yapılmasında ve gerekse değerlendirilmesinde bazı yanlışlar olabilir. Bunları özetlemek gerekirse;

- Yöntem yanılığı,
- Hız ölçüm aletinden (muline) gelen yanlışlar,
- Hidroloğun kişisel yanlışları,
- Abak hatalarından doğan yanlışlar,
- Düşey ve yatay sapma düzeltmeleri yapılmadığı için ortaya, çıkan alan saptanmasındaki yanlışlar,
- Seviye saptama yanlışları,
- Orta seviye hesabındaki yanlışlar,
- Akım ölçüsü hesabındaki yanlışlar,
- Akım anahtarının, yanlış çizilmesinden ya da doğru anahtarın yanlış okunmasından doğan yanlışlardır.

Bu durumlar dikkate alınarak uluslararası saptanmış sınırlara göre, akım ölçülerinin yapılış ve değerlendirilmesinde, göz önünde tutulan yanlış sınırları;

- < % 2 ise akım ölçüsü başarılı,
- < % 5 ise akım ölçüsü iyi,
- < % 8 ise akım ölçüsü orta,
- > % 8 ise akım ölçüsü yetersizdir.

Bu yayının değerlerinde olabilecek yanlış oranı sınırları;

- < % 5 ise verilen değerler başarılı,
- < %10 ise verilen değerler iyi,
- < % 15 ise verilen değerler orta,
- > % 15 ise verilen değerler yetersizdir.

DSİ gözlem yıllığında yayınlanan günlük akım değerlerinde % 5' e denk gelen yanlış kabul edilmiştir.

ORTALAMA SAPMALARDA OLABİLİRLİK YANILGI FORMÜLÜ :

$$\text{Ortalamanın Olabilir Yanılgısı} = \frac{\text{Tek Tek Değerlerin Olabilir Yanılgısı}}{N^{0.5}} \text{ dir.}$$

Aylık ortalamalarda $N=30$ alınarak; aylık ortalamaların olabilir yanılgısının, günlük ortalamaların olabilir yanılgısının bu formüle göre yaklaşık olarak 1:5'i olacağı görülür. Bu nedenle aylık ortalamalar üç basamaklı olarak verilmesi halinde içine düşülen yanılgı % 14'ün altındadır.

Zira :

$$5/100 * 1/5 = 5/500 = 0.01 < 0.14 \text{ dür.}$$

Yıllık ortalamalarda ise, aynı formülden yıllık ortalamanın olabilir yanılgısının günlük ortalamaların olabilir yanılgısının yaklaşık olarak 1/20'si olacağı görülür. Bu nedenle yıllık ortalamalar ondalıklı sayıların üç basamaklı olarak verilmesi halinde içine düşülen yanılgı oranı formülden bulunan %0.25'inin en çok 1:4'ü olmaktadır.

İlk defa 1989 su yılında uygulanmasına başlanan sistemle; DSİ Bölge Müdürlükleri Rasatlar Baş Mühendisliği personeline AGİ'lere ve GGİ'lere ait tüm veriler, Genel Müdürlüğümüz Rasatlar Şube Müdürlüğü'ne "Hidro" yazılımı verisi olarak elektronik ortamda aktarılmış, hidrometrik değerlendirmeler yine "Hidro" yazılımı kullanılarak yapılmıştır.

2006 Akım Yıllığı ve sonraki yıllar hidrometrik değerlendirmeler, "Hidro" yazılımı kullanılarak yapılmış, hidrometrik değerlendirme sonucu elde edilen veriler "Su Veri Tabanı Rasatlar Modülü" yazılımı ile merkez sunucuya aktarılmış ve kitap sayfalarının hazırlanması "Su Veri Tabanı Rasatlar Modülü" yazılımı ile tamamlanmıştır.

Kitap, DSİ Matbaası tarafından basılmış ve çoğaltılmıştır.

2018 KİTABIN İÇERİĞİ, AÇIKLANMASI VE DÜZENLENİŞ YÖNTEMLERİ

DSİ Genel Müdürlüğü'nce işletilmekte olan 1320 adet Akım Gözlem istasyonuna ilişkin veriler, DSİ Bölge Etüt, Planlama ve Tahsisler Şube Müdürlükleri Rasatlar Baş Mühendisliklerince ve Rasatlar Şube Müdürlüğü'nce 'Su Veri Tabanı Rasatlar Modülü' yazılımı kullanılarak değerlendirilmiş; '2018 AKIM GÖZLEM YILLIĞI' adıyla iki (2) cilt olarak yayınlanmıştır. Her cilt ise iki bölüm olarak düzenlenmiştir.

İkinci ciltte toplam 665 istasyonun 2018 su yılı değerlendirilmesi incelenmiştir.

Bu cilttin;

1.Bölümde; 01.10.2017 - 30.09.2018 tarihleri arasında açık durumda bulunan ve değerlendirilen **547** adet AGİ ile çeşitli sorunlar nedeniyle sonradan yeniden değerlendirilen ve bu su yılı kitabında yayınlanan 12 adet AGİ verisi yer almaktadır.

2.Bölümde; 01.10.2017 - 30.09.2018 tarihleri arasında açık durumda bulunan, ancak hidrometrik değerlendirme standartlarını karşılayamadığı için değerlendirilemeyen **118** adet akım gözlem istasyonuna ait bilgiler yer almaktadır.

Bu yılda GGİ verisi yer almamış olup, ayrıca çıkarılacak bir kitapta göl seviye verisi yayınlanacaktır.

1.BÖLÜMLE İLGİLİ AÇIKLAMALAR

1.1 ORTALAMA AKIMLAR (m³/s) :

Gözlem süresinde ortalama akım: İstasyonun açıldığı tarihten başlayarak 30.09.2018 gününe kadar değerlendirildiği süre içinde, günlük ortalama akımların ortalamasıdır.

2018 su yılında ortalama akım: 01.10.2017 – 30.09.2018 tarihleri arasında hesaplanan günlük ortalama akımların ortalamasıdır.

1.2 EN ÇOK VE EN AZ AKIMLAR (m³/s) :

Gözlem süresinde anlık en çok ve en az akım: İstasyonun açıldığı tarihten başlayarak 30.09.2018 gününe kadar değerlendirildiği süre içinde seviye ölçerlerce saptanan seviyelerin en büyüğünün ve en küçüğünün karşıtı bulunan anlık akımlardır.

2018 su yılında anlık en çok ve en az akım: 01.10.2017 – 30.09.2018 tarihleri arasında seviye ölçerlerince saptanan seviyelerin en büyüğünün ve en küçüğünün karşıtı bulunan anlık akımlardır.

1.3 SU YILINDA GÜNLÜK AKIMLAR (m³/s) :

01.10.2017 –30.09.2018 tarihleri arasında AGİ'lerin günlük orta seviyelerinin karşıtı olan akımlardır.

1.4 AYLIK TOPLAM AKIM (Milyon m³) :

Kapsadığı ay içinde ait olduğu istasyon kesitinden geçen toplam suyun milyon metreküp veya hektometreküp cinsinden hacmidir.

1.5 AYLIK EN ÇOK VE EN AZ AKIMLAR (m^3/s) :

Kapsadığı ay içindeki günlük seviyelerin en büyüğü ve en küçüğünün karşıtı olan anlık akımlardır.

1.6 AYLIK ORTALAMA AKIM (m^3/s) :

Kapsadığı ay içinde günlük orta seviyelerinin karşıtı olan akımların ortalamasıdır.

1.7 HAVZA VERİMİ (lt/ sn/km²) :

Aylık ortalama akımın bin ile çarpılıp yağış alanına bölünmesinden elde edilen deęerdir. Regülatörlerde, kanallarda, baraj çıkışlarında ve göl ayaklarında mevcut istasyonların yağış alanı olmadığı için havza verimleri hesaplanmaz.

1.8 AKIŞ YÜKSEKLİĞİ (mm) :

Aylık toplam akımın bin ile çarpılıp yağış alanına bölünmesinden elde edilen mm cinsinden akış yükseklięidir. Yağış alanı olmayan istasyonlarda akış yükseklięi hesaplanmaz.

1.9 AKIM ANAHTARLARININ BELİRLİ SEVİYELERİNİ KAPSAYAN AKIMLAR:

Su yılı içinde en uzun süre kullanılan akım anahtarının belli sayıdaki karakteristik deęerleridir. AGİ'deki belirli seviyelerin karşılığı debiler veya belirli debilerin karşılığı eşel seviyeleri yaklaşık olarak bu küçük tablo yardımı ile bulunabilir.

2. BÖLÜM

2.1 AKIM ÖLÇÜMLERİ :

01.10.2017 - 30.09.2018 tarihleri arasında değerlendirilemeyen AGİ'lerde yapılan akım ölçüleri: Ölçünün yapıldığı tarihler, seviyeler (cm) ve debiler (m^3/s) olarak verilmiştir. Bu akım ölçüleri akım anahtarı çizilmesi ve hidrometrik değerlendirme yapılması için yeterli görülmemiştir.

Bu gözlem yıllığında yer alan gözlem istasyonlarının koordinatları, yağış alanları ve kot (rakım) bilgileri, 1/100000 ve 1/250000 ölçekli haritalardan çıkarılmıştır.

Baraj çıkışında, göl ayağında bulunan regülatörlerde, sulama kanallarında bulunan gözlem istasyonlarında, yağış alanı ve kot bilgisi verilmemiştir.

VERİLERİN GÜVENİRLİĞİ :

Akarsu akım değerlerinin belirlenmesinde; gerek akım ölçüsünün yapılmasında ve gerekse değerlendirilmesinde bazı yanlışlar olabilir. Bunları özetlemek gerekirse;

- Yöntem yanlışlığı,
- Hız ölçüm aletinden (muline) gelen yanlışlar,
- Hidroloğun kişisel yanlışları,
- Abak hatalarından doğan yanlışlar,
- Düşey ve yatay sapma düzeltmeleri yapılmadığı için ortaya, çıkan alan saptanmasındaki yanlışlar,
- Seviye saptama yanlışları,
- Orta seviye hesabındaki yanlışlar,
- Akım ölçüsü hesabındaki yanlışlar,
- Akım anahtarının, yanlış çizilmesinden ya da doğru anahtarın yanlış okunmasından doğan yanlışlardır.

Bu durumlar dikkate alınarak uluslararası saptanmış sınırlara göre, akım ölçülerinin yapılış ve değerlendirilmesinde, göz önünde tutulan yanlış sınırları;

- < % 2 ise akım ölçüsü başarılı,
- < % 5 ise akım ölçüsü iyi,
- < % 8 ise akım ölçüsü orta,
- > % 8 ise akım ölçüsü yetersizdir.

Bu yayının değerlerinde olabilecek yanlış oranı sınırları;

- < % 5 ise verilen değerler başarılı,
- < %10 ise verilen değerler iyi,
- < % 15 ise verilen değerler orta,
- > % 15 ise verilen değerler yetersizdir.

DSİ gözlem yıllığında yayınlanan günlük akım değerlerinde % 5' e denk gelen yanlış kabul edilmiştir.

ORTALAMA SAPMALARDA OLABİLİRLİK YANILGI FORMÜLÜ :

$$\text{Ortalamanın Olabilir Yanılgısı} = \frac{\text{Tek Tek Değerlerin Olabilir Yanılgısı}}{N^{0.5}} \quad \text{dir.}$$

Aylık ortalamalarda $N=30$ alınarak; aylık ortalamaların olabilir yanılgısının, günlük ortalamaların olabilir yanılgısının bu formüle göre yaklaşık olarak 1:5'i olacağı görülür. Bu nedenle aylık ortalamalar üç basamaklı olarak verilmesi halinde içine düşülen yanılgı % 14'ün altındadır.

Zira :

$$5/100 * 1/5 = 5/500 = 0.01 < 0.14 \text{ dır.}$$

Yıllık ortalamalarda ise, aynı formülden yıllık ortalamanın olabilir yanılgısının günlük ortalamaların olabilir yanılgısının yaklaşık olarak 1/20'si olacağı görülür. Bu nedenle yıllık ortalamalar ondalıklı sayıların üç basamaklı olarak verilmesi halinde içine düşülen yanılgı oranı formülden bulunan %0.25'inin en çok 1:4'ü olmaktadır.

İlk defa 1989 su yılında uygulanmasına başlanan sistemle; DSİ Bölge Müdürlükleri Rasatlar Baş Mühendisliği personeline AGİ'lere ve GGI'lere ait tüm veriler, Genel Müdürlüğümüz Rasatlar Şube Müdürlüğü'ne "Hidro" yazılımı verisi olarak elektronik ortamda aktarılmış, hidrometrik değerlendirmeler yine "Hidro" yazılımı kullanılarak yapılmıştır.

2006 Akım Yıllığı ve sonraki yıllar hidrometrik değerlendirmeler, "Hidro" yazılımı kullanılarak yapılmış, hidrometrik değerlendirme sonucu elde edilen veriler "Su Veri Tabanı Rasatlar Modülü" yazılımı ile merkez sunucuya aktarılmış ve kitap sayfalarının hazırlanması "Su Veri Tabanı Rasatlar Modülü" yazılımı ile tamamlanmıştır.

Kitap, DSİ Matbaası tarafından basılmış ve çoğaltılmıştır.

D15A325 KAVAKLI D. DEMİRYAZI

YERİ : SİVAS-ULAŞ DEMİRYAZI KÖYÜNÜN GÜNEYİNDEDİR. (PAFTA: SİVAS I38-D3)
37°12'44" Doğu - 39°30'24" Kuzey

YAGIŞ ALANI : 20,26 km² YAKLAŞIK KOT : 1447 m

GÖZLEM SÜRESİ : 01.05.2011 - 30.09.2018

ORTALAMA AKIMLAR : Gözlem süresinde 0.117 m³/sn. (7 Yıllık) 2018 Su yılında 0.064 m³/sn.

ANLIK EN ÇOK VE EN AZ AKIMLAR:

2018 Su yılında anlık ençok akım : 0.378 m³/sn 12.05.2018
2018 Su yılında anlık enaz akım : 0.024 m³/sn 25.11.2017
Gözlem süresinde anlık ençok akım : 2.350 m³/sn 21.06.2015
Gözlem süresinde anlık enaz akım : 0.002 m³/sn 17.10.2011
